# FRONT-END-1 WEEK 3.

All right now lets do some templates forms using bootstrap and your own css style.
Create a website with 2 centered buttons. Each button displays the forms below as modals

Form 1: Reservation form. You will find the icons in the folder 'icons'

- The input date has to block the days before today. This can be a hardcoded date based on the date of your commit. A stretch goal is to use javascript to programmatically have it use today's date, but that wasn't covered in this weeks assignment.
- Phone input should has a validate format.
- The options for the time input should be each 30 minutes
  - starting at 10:00 AM
  - finishing at 00:00 AM
- The options for the people input are from 1 to 20
- All the inputs are required

Form 2: Application form. All inputs are required.
